

CoverTec
innovative chemistry for substrate solutions

Project History: Great Bays Kids Company Portsmouth NH

The Problem

Great Bay Kids' Company, a non-profit organization required a cost effective solution for their worn out floors. To keep the vinyl floor (VCT) safe and hygienic for the children, the floor had to be stripped and waxed on a quarterly basis. The existing vinyl floor tile was old, dirty and damaged beyond repair. However the cost to rip up and replace was very expensive and time consuming.

The Solution

CoverTec Products teamed up with Iclean Facility Services to offer the Client a tough durable CoverShield flooring system. This system, available in many color options, could be applied directly over the top of the existing worn out tile. After stripping and cleaning the dirty and stain tile, two coats of tan colored base coat E400WB was applied. This base coat was then sealed with a single coat of Vinyl Guard a tough clear polyurethane coating. All products used, were water based and low odor, easily meeting indoor air quality IAQ criteria.

The Results

Facility Saved thousands of dollars in rip-up and install.
New hygienic hard wearing floor surface that will not absorb, liquids, odors and stains.
Floors that are easy to clean and maintain, saving budgets, saving on materials and saving on time.
