

## Project History: Grease and Contaminated Quarry Tile Floor

**BEFORE CLEANING**

### The Problem

Management at the Holiday Inn South Beach, Miami FL, were looking for a tile and grout cleaner tough enough to cut through heavy food based grease and oil deposits in their commercial kitchen. Although the quarry tile floors were cleaned regularly they always seemed to have a residue on the floors which presented a

**AFTER CLEANING**

### The Solution

CoverClean FG was used as a fast and effective way to deep clean the tile and grout. This professional grade cleaner was also environmentally friendly and entirely safe to use in kitchens and food preparation areas.

CoverClean FG applied to surface and then agitated with stiff brush or floor scrubber with quickly break down heavy grease

The product was applied by pump up spray application at rate of 200 sq.ft per gal. After the product sat for a few minutes a Gloss Boos Auto Scrubber was used to agitate the cleaner and work it into the grout.

After 10 minutes all cleaning material was removed by rinsing with clean water direct to the drain. One added benefit was that the microbes continued to work and clean the grease trap including breaking down the odor causing molecules, even after surface cleaning has been achieved.
